

Hello everyone. Next, the nurse updated Sara's Electronic Health Record, or EHR. My name is Maith Alazani. This is for class HLT4263, Task 14. The doctor checked Sara and gave her a diagnosis. She told Sara what medicine to take and when to take it. The doctor also made a referral because Sara needed to see another doctor later to check her health. After that, Sara was ready for discharge. Discharge means the patient can leave the hospital and go home. Today, I will tell you a simple story about a patient leaving the hospital. One day, a patient called Sara came to the hospital because she was sick. This means the doctor found out why she was sick. Sara stayed in the hospital for two days. The doctor gave her treatment to help her feel better. Thank you for listening.
