The "Space Rover" project is a project that aims to design and build a small spacecraft (rover) capable of exploring the surface of other planets or moons, such as Mars or the Moon. The rover is equipped with a range of modern tools and technologies to collect scientific data, such as analyzing soil, taking photos, and measuring environmental conditions. **Project idea:** The idea of the project is to develop a vehicle capable of moving independently on the surface of planets, with the possibility of controlling it remotely from Earth. The project includes several
