

METTLER TOLEDO's Solution for Automated Gravimetric Standard Preparation XPR analytical balances are the perfect choice for challenging weighing applications that require exceptional accuracy. Effortless Data Management Weight results can be saved directly to the built-in results protocol, eliminating manual transcription. With fast results, right-first-time quality assurance functions and automation options, XPR analytical balances help you to improve throughput and reduce costs. Reduce Risk of Contamination The optional ErgoClip Flask enables you to dose directly into your volumetric flask. Eliminate Electrostatic Charges and Avoid Weighing Errors Containers and samples, particularly powders, are prone to becoming electrostatically charged through normal handling. Multiple connectivity options (USB, Ethernet), enable your data to be transferred digitally to your existing information system.
