

Tuple is Immutable and ordered, fixed data. Dictionary is Mutable, unordered, stores key-value pairs. Tuple advantage is that you can store data you don't want to change or forget to write. Disadvantage in dictionary is that if your data is not fixed and then you won't be able to find your data. If you do not remember the name of the dictionary it's hard to find it. Advantage of dictionary: You can find the saved data you wanted by just typing the key. And you can save as much as you want in a dictionary. Customer information (ID, name) – Use a tuple for immutability. List is Mutable, ordered, allows changes. Purchased items list – Use a list for ordered, mutable data.
