

This security setting determines whether the OS audits each time this computer validates an account's credentials. Default values on Client editions: Credential Validation: No Auditing Kerberos Service Ticket Operations: No Auditing Other Account Logon Events: No Auditing Kerberos Authentication Service: No Auditing Default values on Server editions: Credential Validation: Success Kerberos Service Ticket Operations: Success Other Account Logon Events: No Auditing Kerberos Authentication Service: Success Credential validation is stateless so there is no corresponding logoff event for account logon events.
