

1. Continuous Improvement: The goal of continuous improvement in health and safety risk control is to update and evaluate safety policies, processes, and measures on a regular basis to meet emerging risks, legislation, and technological advancements. Prevention First: Prior to accidents or diseases occurring, the principle of prevention highlights the significance of taking proactive steps to control and mitigate health and safety hazards. Organizations may greatly lower the chance of workplace accidents and foster a culture of ongoing safety improvement by emphasizing prevention. Administrative controls: Modifying employee workflows or rearranging tasks to minimize exposure to risks. 2. 3.
