

Though a desert region, UAE has a long sea coast with sandy beaches. There negligible rain water contamination in UAE as air pollution is controlled with strict regulations and monitoring of vehicles and industries. Sewage and Waste Treatment plants duly take care of waste from homes and commercial areas. Industrial waste is also managed and treated according to regulations. Oil spills from ships etc and Eutrophication through farming is also monitored and controlled adequately. Furthermore, the government exercises a strict control on the quality of drinking water.
