

Exploration is very important for human success. On the other hand, Scientists think that oceans play a critical role in our life, from the air we breathe, the food we eat and the weather we live in. The oceans are full of treasures, minerals and mysteries. The first team believe in exploring oceans while others prefer exploring outer space. Exploring outer space is important for some scientists as they look for the opportunity to live there. Moreover, the astronauts need a long time to prepare themselves and gain many skills. Finally outer space is wide and endless. However, scientists have two points of view.
