

Effective classroom environment: Effective classroom environment: For the teacher to implement the best teaching methods for students, then the classroom environment must be a place that fits the students' needs and interests. Keeping the classroom climate positive, where the teacher can greet the students every day and ask them about what they did in the weekend or how are they feeling today. Also, providing positive feedback, such as complimenting the student on their work or giving them a high five whenever they get a correct answer or a wrong one, these types of feedback make students more confident, excited to learn and it motivates them to develop their skills. If the atmosphere of the classroom is not convenient or helpful to address the students' needs and interests, then the students will not be interested nor encouraged to learn. Being comfortable in the classroom is one of the most important needs of a student, he/she must feel comfortable to ask the teacher or their peers any inquiry they want to know about.
