

While choosing a university to apply in South Korea, Korea University was one of the universities that caught my attention. I plan on applying the knowledge I already have about software programming and designing and add in the latest discoveries of AI to gain more experience and allow me better chances in my future career. Seeing all that made me realize how I want to gain deeper theoretical and practical knowledge on the 4th industrial revolution and improve human life in the different technologies that artificial intelligence offer in many sectors, such as medical care, education, and finance security. The department of artificial intelligence had a clear introduction to the aims and objectives of the department as well as to the outstanding curriculum. It also described the different courses classifications being theoretical, programming and application.
