

Advocacy or editorial framework However, fundamentally, a South American literacy worker and author of *The Persecuted Pedagogy*, founded his research philosophy on these principles He argued that Introduction to Educational Research By working on literacy skills with poor and oppressed Chilean workers in the 1960s and 1970s Freire emphasized that research should be conducted in a collaborative manner with members of the community involved in the selection and analysis of topics during data analysis. This collaboration requires that the researcher engage in a respectful dialogue with the study participants and understand the reality from a society's perspective. It may use quantitative methods created in collaboration with participants if these data will help people achieve social changes in their society According to Ferrari and other editorial investigators in advocacy, you should be involved in research as a form of social advocacy.
