

We can make an environmentally friendly city where you are *

- * It works on a stand-alone economy that obtains its resources locally
- * Completely carbon-free by promoting technologies such as the use and production of renewable energy
- * Established on a good planning basis for the city that encourages walking, cycling and the use of public transport systems
- * Promotes resource conservation through increased rationalization of water and energy consumption, with the management of an environmentally beneficial waste management system as it encourages recycling and reuse to create a waste-free system

With the aim of improving the quality of life of its residents and enhancing the effectiveness of government services and infrastructure. Smart cities are characterized by the effective use of data, analysis and technology to improve the experience of the population and promote sustainability, efficiency and a green space through the Green Cities Initiative
