

1. Add the solvent to the chromatography tank/jar to a depth of 2 cm or the desired level depending on the jar. Put on the lid and allow 10 minutes to equilibrate 2. Select a 10 cm x 10 cm chromatography paper. Using a thin capillary tube, spot the prepared extract onto the paper (small spots will give the best results). Draw a light pencil line approximately 2.5 cm from the bottom of the paper 4. Make sure that you do not puncture the paper. 3. 5. 6. 8.
