

Solar Energy has many advantages that benefit us in our life. According to MARGARETA WOLF (2004), The use of solar energy offers huge potential for natural resource and climate protection, and for the expansion of renewable energies on the road to a future-oriented energy supply. Another advantage is that it has an important role in the field of agriculture as it pumps groundwater to irrigate agricultural land through devices working on solar energy. The most important feature is that solar power is a renewable source.
